The tee in the above picture actually goes thru the firewall directly below the 2 heater hoses. Fortunately, it broke(or was chewed thru) and left about a 1" stub that I was able to slice the 2 pieces back together using a small rubber vacuum line. Works great. I'll do a better fix later, if it breaks again. Jim, I wish you would let me pay you ...

Small rubber vacuum / emission hoses can only last so long under the continual under-hood heat and road conditions. If the emission hoses under the hood of your car are original, it's time to replace them now, rather than wait. If you wait, it can lead to air leaks and cause idle or drivability problems, and most likely some diagnostic trouble codes like a P0171 or P0174. Your car may not idle ...

Turns out the check valve in the vacuum line that is in the tee from the vacuum line off the manifold to the under dash diverter control cannot hold the vacuum under these conditions. Vacuum is what causes the diverter to direct air to the front or floor vents. Absence of vacuum causes the control to direct air to the defroster vents (a safety issue I am sure). A new vacuum check valve can be ...
