Centripetal force  $F_c$  is always perpendicular to the path and pointing to the center of curvature, because a  $c$  is perpendicular to the velocity and pointing to the center of curvature. Note that if you solve the first expression for  $r$ , you get  $r = \frac{mv^2}{F_c}$ . This implies that for a given mass and velocity, a large centripetal force causes a small ...

Rotate the apparatus and let the spring provide the inward centripetal force. Reconnect the spring. The stretched spring will pull the bob inward. Practice rotating the axis until you can achieve a smooth motion that will cause the bob to pass directly over the pointer as the apparatus rotates. By doing this you have determined a speed such that the inward pull of the stretched spring provides ...
