It is well known that the Dirichlet problem has its origins in the study of physical phenomena such as the heat distribution across a certain surface, or the electrical flow through a conductor under certain prescribed constraints. Such studies led, over the centuries, to an extraordinary evolution of the subject, motivating scientists to make fundamental advances not only in physics, but also ...

The Enrichment stage is independent of the earlier Challenge stage; however, they have the common feature of providing challenging mathematics problems for students, as well as accessible support materials for teachers. The stages are in order of difficulty with general year level recommendations: Ramanujan (years 4–5), Newton (years 5–6), Dirichlet (years 6–7), Euler (years 7–8 ...

Dirichlet problem for what differential operator? By default I assume the Laplacian. With what kind of boundary data? By default I assume continuous. Then smoothness is not needed for uniqueness: if two harmonic functions on a bounded open set have the same continuous extension to the boundary, then they are identical. The reason is indeed the ...

Problem (4) has unique solutions then Dirichlet Problem (5) has unique solutions. Similarly we can probe the converse that if Dirichlet Problem (5) has unique solutions then Dirichlet Problem (4) has unique solutions. Note that there is an alternative way to finish the proof. Consider the set $S = \{t \in [0, 1] : L(t) \text{ exists}\}$. We have already shown using the Schauder estimates and contraction mapping ...

The next steps in the study of the Dirichlet's problem were taken by Karl Friedrich Gauss, William Thomson (Lord Kelvin) and Peter Gustav Lejeune Dirichlet after whom the problem was named and the solution to the problem (at least for the ball) using the Poisson kernel was known to Dirichlet (judging by his 1850 paper submitted to the Prussian academy). Lord Kelvin and Dirichlet suggested a ...

[The General Dirichlet Problem on a Rectangle](#)

Abstract. In this paper we present a L^p approach to the Dirichlet problem and to related regularity problems for higher order elliptic equations. Although this approach is not as simple as the well known Hilbert space approach developed by Yishik [32] Garding [14], Browder [6 ; 7], Friedrichs [12], Morrey [22], Nirenberg [23], Lions [18] and others, it has the advantage of a greater generality.

The problem of finding the solution to a general elliptic type partial differential equation, when the boundary values are given, is generally referred to as the Dirichlet Problem. In this paper I consider the special elliptic equation $\Delta u = 0$ using the Poisson kernel, and I limit myself to the case of two dimensions. Subject to these limitations I discuss five proofs for the existence of ...

Dirichlet series are functions of a complex variable s that are defined by certain infinite series. They are generalizations of the Riemann zeta function, and are important in number theory due to their deep connections with the distribution of prime numbers. They have interesting connections with multiplicative functions and Dirichlet convolution.
