Life cycle. A baby hippo is born in the water and starts swimming right away. I think it's really cool that they are born knowing how to swim. Baby hippos weigh about 55-120 pounds at birth. About the weight of a large adult dog! Young hippos can stay underwater for about 30 seconds. At about 3 weeks old, the hippo stops nursing from its mother and begins to eat grass. Baby hippos often will ...

Garter Snake Life Cycle. Snakes are interesting animals. They are found in different places around the world. Snakes are cold-blooded and are covered in scales. Their eyes are protected by a clear set of scales which helps them to see without needing to blink. Snakes do not have great eye sight and cannot see very far. They rely on their tongue to smell and sense vibrations. A garter snake is ...

[Life Cycle - ALL ABOUT THE WALRUS](#)

A life cycle is sometimes called the circle of life because animals and plants are born, grow into adults, reproduce and then die but their children then continue their own life cycle. The pattern repeats over and over again, sometimes for millions of years. Showing the pattern as a circle helps us see how it repeats.
