METAFONT METAPOST TEX

Sep 20, 2020

[Metafont Metapost Tex](#)

MetaPost can interface with TeX to get character metrics and include type in its output. This is not possible in METAFONT (well, there are some TUGboat papers describing clever usage of METAFONT). Fonts created by METAFONT are usable with pdftex: all that's possible in Knuth TeX is possible also with pdftex.

[MetaPost – Wikipedia](#)

cerpts from the Programs for TEX and META-FONT" (Knuth, 1992b), which combines Com-puter Modern Bold Extended with the logo font. TEX and METAFONT 1993/03/23: Knuth (1993a) adds the characters \P" and \S" to the logo font such that one can typeset \METAPOST" with it. Hobby (2009) states that both of the following logos are okay: METAPOST MetaPost

[MetaPost - Wiki - ConTeXt](#)

METAPOST uses a language based on that of METAFONT to produce precise technical illustrations. Its output is scalable PostScript or SVG, rather than the bitmaps METAFONT creates.

[Why Metapost discrimination? - TeX - LaTeX Meta Stack Exchange](#)

MetaPost is a programming language much like Knuth's METAFONT [8] except that it outputs either vector graphics in the Postscript or SVG formats or bitmap graphics in the PNG format. Borrowed from METAFONT are the basic tools for creating and manipulating pictures.

[METAFONT und METAPOST 160 - uni-ulm.de](#)

Metafont ist eine abstrakte Beschreibungssprache zur Definition von Vektorschriften. Es ist auch der Name des zugehörigen Interpreters, der den Metafont-Code ausführt und Bitmap-Schriften bestimmter Auflösung erzeugt. Es wurde von Donald E. Knuth als Begleiter von TeX entwickelt, um den zweiten Band von The Art of Computer Programming zu setzen, da er mit dem Resultat des Fotosatzes des ersten Bandes unzufrieden war. Metafont ist speziell entworfen, um TeX zu unterstützen, und ...

[CTAN: Package Metafont](#)

Metafont is a description language used to define raster fonts. It is also the name of the interpreter that executes Metafont code, generating the bitmap fonts that can be embedded into e.g. PostScript. Metafont was devised by Donald Knuth as a companion to his TeX typesetting system. One of the characteristics of Metafont is that the points defining the shapes of the glyphs—for example top of a stem, or intersection of a stem and crossbar—are defined with geometrical ...

[Help for MetaPost - Purdue University](#)

Metafont and MetaPost. Metafont is a system created by Donald E. Knuth for generating fonts, in particular for use with TeX, his well-known typesetting system. 1 Expressed in a somewhat simplified way, Metafont is a system for programming curves, which are then digitized and output in the form of run-time encoded bitmaps. (See Knuth's The Metafontbook for more information).

[MFPIC: Pictures in TEX with Metafont and MetaPost](#)

MetaPost is based on metafont and was developed by John Hobby [Hob92]. Although the user manual explains pretty much everything about the language I found the meta-fontbook was a useful supplement. Both [GRM97] and [Hoe98] give examples of MetaPost code; the cover illustration on Hoening's book is a MetaPost picture. MetaPost produces

Metafont output is monochrome, whereas MetaPost uses RGB or CMYK colors. The MetaPost language can include text labels on the diagrams, either strings from a specified font, or anything else that can be typeset with TeX. Starting with version 1.8, Metapost allows floating-point arithmetic with 64 bits (default: 32 bit fixed-point arithmetic)

[texdoc.net](#)

MetaPost is a picture-drawing language similar to Metafont (see section Metafont: Creating typeface families), but instead of outputting bitmaps in a "font", it outputs PostScript commands. It's primarily intended for creating technical illustrations. MetaPost also provides for arbitrary integration of text and graphics in a natural way, using any typesetter (TeX and Troff are both supported ...

[Getting MetaFont to do what you want | The TeX FAQ](#)

METAPOST is the graphic companion of TEX. It is a graphic programming language developed by John Hobby that allows its user to produce high-quality graphics. It is based on Donald Knuth's METAFONT, but with PostScript output and facilities for including typeset text. This course is only meant as a short, hands-on introduction to METAPOST for newcomers who want to produce rather simple ...
