[Reindeer Population Growth Activity Answers](#)

Changes in reindeer population on St. Paul Island between 1911 and 1950 ... Could emigration or immigration have played a major role in determining the size of the reindeer population? Explain your answer. What might account for the tremendous increase in the population of reindeer between 1930 and 1938, as compared with the rate of growth during the first years the reindeer were on the island ...

Reindeer Population Growth NAME_____ (Adapted from a BSCS Activity) Four rates – birth rate, death rate, immigration, and emigration - determine a population's size. A given area can support only a certain number of individuals on a long term basis. That number is known as the CARRYING CAPACITY. Populations grow at different rates: the DOUBLING TIME is the number of years required for a ...

grow antlers, though they are typically larger in males. There are a few populations where females lack antlers completely. Even far outside its range, the reindeer is well known due to the myth, probably originating in early 19th century America, in which Santa Claus's sleigh is pulled by flying reindeer, a popular secular element of Christmas. The reindeer is a widespread and numerous ...

[Lessons about Population Growth](#)

The reindeer (*Rangifer tarandus*), also known as the caribou in North America, is a species of deer with circumpolar distribution, native to Arctic, sub-Arctic, tundra, boreal, and mountainous regions of northern Europe, Siberia, and North America. This includes both sedentary and migratory populations. Rangifer herd size varies greatly in different geographic regions.

Age composition counts made in 1963 indicate that the reindeer were experiencing a deceleration in their rate of population growth at that time. In the 1957 counts, the ratio of fawns to adult females was obtained from a sample of 910 animals and the ratio of yearlings to adult females from a sample of 218 reindeer. In these samples there were 75 fawns and 45 yearlings per 100 adult females. In the 1963 counts the ratios were 60 fawns and 26 yearlings per 100 females in samples of 1,652 and ...

TOPIC IN BIOLOGY: POPULATION GROWTH. An example of a population growing exponentially that exceeded its carrying capacity occurred on Saint Paul Island of the coast of Alaska in the early part of the century. Reindeer were introduced to replace the native caribou which had been hunted to extinction. The reindeer found the island suitable to ...

Population Growth Curves Activity ... answers will vary, but will be approximately 150 in most cases In most cases, there will be a few empty cells in the Petri dish (should be black in appearance). These are locations where the previous organism has died, and a new organism has yet to take that space. So, even though the environment will support 900 organisms, you will probably have a total ...

[GRAPHING THE HUMAN POPULATION ANSWER KEY PDF](#)

Use the data from your graph to support your answer. 3. Why do you suppose the population of deer declined in 1925, although the elimination of predators occurred? 4. Why do you think the deer population size in 1900 was 4,000 when it is estimated that the plateau has a carrying capacity of 30,000? 5. Based on these lessons, suggest what YOU would have done in the following years to manage deer ...

[World Population Map Activity Guide](#)

How reindeer populations are faring across the Arctic. Green is increasing, red is decreasing and orange is unknown. Source: Arctic Biodiversity Trends 2010. One of the two big reindeer populations in west Greenland declined from about 45,000 to 35,000 between 2001 and 2005. Scientists don't have enough data on the second one to know for sure how numbers have changed. Though most of the ...

[Facts About Reindeer | Live Science](#)

In '63, during their population peak, the talk of town among the reindeer might have been something like:"Hmm, food is getting a bit scarce. Might be we can't grow or population more. Perhaps it's even going to have to shrink. A little bit. Over the next ten years or so."They probably had no clue whatsoever that they were just two years away from a rapid population decline of 99.3%.Makes me go ...

Exponential equations are indispensable in science since they can be used to determine growth rate, decay rate, time passed, or the amount of something at a given time. This module describes the history of exponential equations and shows how they are graphed. Sample problems, including a look at the growth rate of the reindeer population on St. Matthew Island in the Bering Sea, illustrate how ...
