Solutions to Chapter 2 Exercises 1. The lifetime (measured in years) of a processor is exponentially distributed, with a mean lifetime of 2 years. You are told that a processor failed sometime in the interval [4;8] years. Given this information, what is the conditional probability that it failed before it was 5 years old? Solution: Denote the lifetime of the processor by  $T$ . Since  $E(T) = 2$ ,  $= 0 \dots$

Main Fault-Tolerant Systems. Fault-Tolerant Systems Israel Koren, C. Mani Krishna. There are many applications in which the reliability of the overall system must be far higher than the reliability of its individual components. In such cases, designers devise mechanisms and architectures that allow the system to either completely mask the effects of a component failure or recover from it so ...
