Charcot neuroarthropathy is a severe complication in the feet of patients with diabetes, which can lead to a major amputation. Osteomyelitis and surgery for osteomyelitis have been reported as trigger mechanisms of developing Charcot neuroarthropathy. However, the development of acute Charcot neuroarthropathy triggered by osteomyelitis during ...

[Clinics in Podiatric Medicine and Surgery - Journals - NCBI](#)

Charcot foot can develop when a person sprains or breaks a bone in their foot or ankle and the injury goes untreated due to a lack of sensation caused by peripheral neuropathy. The person continues to walk on the broken foot, causing trauma to the bone. As part of the body's natural reaction to trauma, the bone begins to lose calcium and other materials that keep bones strong.
